

RR Paraffin Solvent Technical Data Sheet

Product Summary:

RR Paraffin Solvent is a proprietary formulation that will dissolve paraffins and asphaltene in the oilfield. It is formation compatible and can be pumped at temperatures below zero degrees and there is no heating required. RR Paraffin Solvent is a multi-component formula maximized for complete absorption of paraffins and asphaltene deposits and holding them in solution from the formation to the surface equipment.

Typical Applications and Uses:

- Dissolves paraffins and asphaltenes in the formation, downhole pumps, tubing, flow lines, and surface equipment resulting in increased production, sustained productivity, longer pump life, and a reduction in operational costs
- Reducing or even eliminating hot oil treatments
- Production enhancement
- Reduction of BS&W in tanks
- Chemical pigging for pipelines
- Flowline maintenance
- Tubing, rods, pump, and surface equipment cleanup
- Perforation and near well bore cleanup

Physical Properties:

Product Name: RR Paraffin Solvent
Physical Form: Liquid
Color: Clear
Specific Gravity: 0.85 +/- 0.05
Solubility in Water: Insoluble

Complete information on health hazards, PPE, handling procedures, environmental hazards and disposal is listed in the current Safety Data Sheet (SDS) for this product.
